# Basics
```

In [13]:
```
# 1. Read First Line Write a program to open sample.txt and print only the first li
with open ("sample.txt","r") as file:
    first_line = file.readline()
    print(first_line)
```

```
Welcome to the Magical World of Python
```

In [14]:
```
# 2. Write and Read Back Write &quote ;Welcome to the magical world of Python&quot;
# file, then reopen it and print the content.
with open ("sample.txt","w") as file:
    file.write("Welcome to the Magical World of Python")
with open ("sample.txt","r") as file:
    print(file.read())
```

```
Welcome to the Magical World of Python
```

In [15]:
```
# 3. Count Characters Read a file and print the total number of characters.
with open ("sample.txt","r") as file:
    c = file.read()
    print("Total Number of Characters: ", len(c))
```

```
Total Number of Characters:  38
```

In [16]:
```
# Level - 2 - Moderate
```

In [17]:
```
# Print Specific Line Print the 3rd line from myfile.txt using readlines().
with open ("sample.txt","r") as file:
    l = file.readlines()
if len(l) >= 3 :
    print(l[2])
else:
    print('the file has less than three lines.')
```

```
the file has less than three lines.
```

In [18]:
```
# 5. Append Mode Add &quot;This is appended text from write your name &quot; to the
# end of a file without overwriting existing content.
with open ("sample.txt","a") as file:
